Assignment Title:
"Repository Modification and Branch Push using Git CLI"

Objective:
Students will demonstrate proficiency in basic Git operations — cloning, branching, editing, committing, and pushing to a remote repository using the Git Command Line Interface (CLI).

Problem Statement:
Your task is to:

1. **Clone** a public GitHub repository.
2. **Create a new branch** named using your **Student ID** (e.g., 20251019_12345).
3. **Modify a file** in the repository (add your name and ID to a README or info file).
4. **Commit** the changes with a clear message.
5. **Push** your branch to the remote repository.

After completing, submit the **GitHub URL** of your branch.

? Detailed Steps:

1. **Clone the Repository**
2. git clone git@github.com:asifzaman3180/assignment_4.git
3. cd assignment_4
4. **Create a New Branch Named After Your Student ID**
5. git checkout -b 20251019_12345
6. **Modify a File**
    - Open myname.c using any editor.
    - Print your details, for example:
    - Name: Asif Zaman
    - Student ID: 20251019_12345
7. **Add the Changes**
8. git add myname.c
9. **Commit the Changes**
10. git commit -m "Added student info: Asif Zaman (20251019_12345)"
11. **Push the Branch to GitHub**
12. git push origin 20251019_12345 (git push --set-upstream origin 20251019_12345)
13. **Verify Your Work**
    - Go to your GitHub repository link.
    - Ensure your branch appears under the **Branches** tab.
    - Check that your changes are visible in the modified file.
